

## Center for Mineral Metabolism Clinical Research – Active Studies

Short Title	The Effect of PCC on the Risk for Kidney Stones and Osteoporosis after Bariatric Surgery
Study Number	042007-045
Study Title	Effects of Potassium Calcium Citrate (PCC) on Risk Factors for Kidney Stones and Osteoporosis after Bariatric Surgery
Disease/Condition Under Study	Kidney Stones/Osteoporosis
Brief Description of Study	A 4 week crossover study with potassium calcium citrate and water. The study will require a screening visit and two 4-day inpatient stays.
Participant Eligibility	Age: 25-70 years old
	Bariatric surgery at least one year before enrollment
	Excluded: Those with jejunioileal bypass, or treatment with drugs for osteoporosis
Study Drug	Potassium Calcium Citrate
Study Doctor	Khashayar Sakhaee, MD
Location	Clinical Trials Office in the Aston Center
	Clinical and Translational Research Center
